## DETAILED ACTION

### *Claim Objections*

Claim 3 is objected to because of the following informalities: the “asymmetric shape, in a sectional side view” of the body is claimed twice. See claim 1 and claim 3. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin US Patent 6,325,827 B1.

Lin discloses an intervertebral implant comprising a main body (20) having a pair of upper and lower surfaces (see attachment) and a pair of side surfaces connected to the upper and lower surfaces (see Figs. 7 & 8). The body discloses withdrawal prevention means (see teeth on Figures) formed asymmetrically in a sectional side view (each tooth is different therefore, they are asymmetrical, see Fig. 8). The withdrawal prevention means comprises a plurality of linear claws (24a and 24b).

Regarding claim 2, see Fig. 8.

Regarding claim 3, see Figs. 8 & 9.

Regarding claims 4 & 5, see Fig. 8 and attachment.
